

COVID-19 Situation Update for Alleghany County August 13th, 2020

This document is intended to provide a regular update on the local response to COVID-19 in our communities and timely, trended data related to COVID-19. This report will be published on Thursdays each week for the Sunday through Saturday of the prior week.

Situation Update for August 2 through August 8, 2020

We are continuing to closely monitor the ongoing outbreak at <u>Bottomley Evergreens and Farms</u>. To date, there have been 107 confirmed cases associated with the farm.

As cases continue to increase for Alleghany County, we are urging everyone in the community to help us slow the spread of this virus. This pandemic has made it more apparent than ever that each person's health is affected by the community as a whole and it will take all of us working together to have an impact and begin to see our cases decline.

Of the newly identified cases for this week, we are continuing to see the same trend with cases exposed due to close contact with others through living or working closely with others or attending social gatherings.

"We are concerned about increased community transmission with more cases reported. This virus is highly contagious and sometimes people can spread the virus without realizing it because they have mild or no symptoms at all. By practicing the 3Ws and avoiding large gatherings of people, we can slow the spread together," stated Jennifer Greene, Health Director, AppHealthCare.

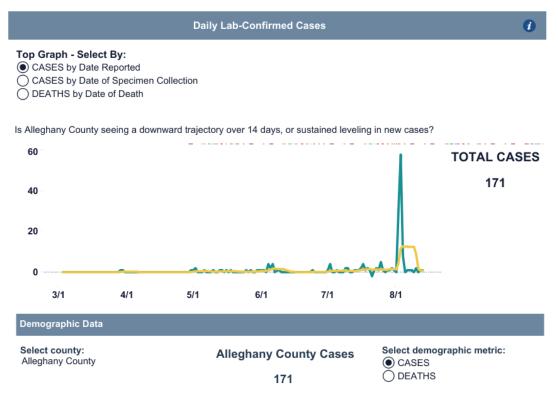

Key points from this week:

- NC DHHS routinely monitors sharp increases, trends, and positivity rates among counties in NC. Alleghany County was identified as a county of interest after the recent rapid rise in cases. We have since outlined our current resources and response plans with NC DHHS. The outbreak recently announced is the major reason for this sharp increase in cases as you can see by reviewing the graphs below. We will continue to monitor trends as we move forward in response.
- Our case trends have continued to increase with the largest percentage of cases in the 25-49 year old age group.
- On Saturday, August 8th we held a community testing event for Ashe and Alleghany residents in partnership with Mako Medical Labs and conducted 104 tests with 5 of those resulting positive. We are very pleased with how the event turned out and it was successful because of strong community partnerships. We appreciate each person who came out to be tested.

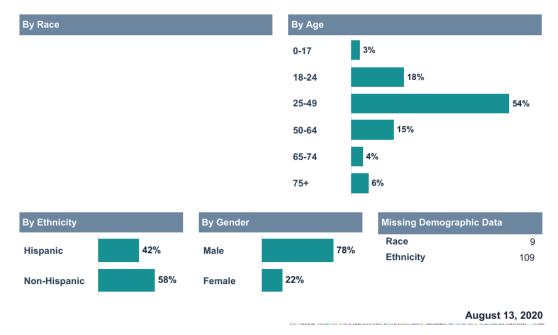

- Open communication continues with Alleghany County Schools as they prepare for a new school year. We are working closely with them to provide public health information to guide their decision making and to prevent the spread of COVID-19.
- We are continuing to work to increase testing opportunities for the community. Planning for proactive testing for staff in locations that have opted-in to that service continues. Also, we are conducting response based testing when data gathered in the case investigation of a positive case informs the need to conduct broader testing. These response based testing events are intended to focus on areas where there is potential for further spread, a cluster of cases, or an outbreak.
- PPE (personal protective equipment) levels remain stable.
- Turn-around times for testing have improved with most tests resulting around 2-4 days.
- We have posted additional positions to assist with COVID-19 response efforts to respond to the increased demand due to increased cases. More information about those positions can be found <u>here</u>.
- Outreach continues to be an important part of our collective community strategy to address COVID-19. Regular meetings take place with community partners to discuss the current situation in the county, strategize areas for growth and improvement and provide a time for questions and answers.

Demographic Data from NC DHHS as of August 13th

NC DHHS updates this data daily and can be found on NC DHHS's website

For demographic groups where the county has fewer than five cases and the county has a population of fewer than 500 for that demographic, then that data is suppressed for privacy and the graph for that demographic won't appear. For example, if a county has fewer than five cases in people 18-24 years old and the county population has less than 500 people who are 18-24 years old based on census data, then the age graph will not appear for that county. Numbers may not sum to 100% due to rounding.

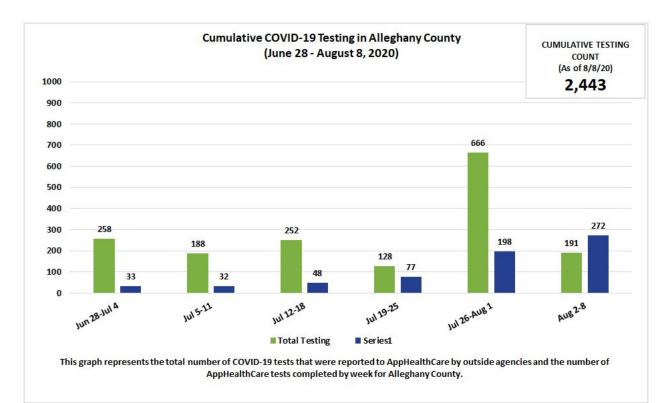

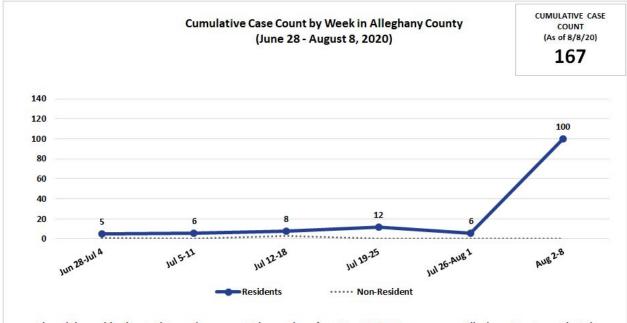

Data for Alleghany County

An important note about data context: The graphs below show the available data. Please carefully read the descriptions below the graph to understand the data limitations. The most current data is available on the <u>AppHealthCare dashboard</u>, as the data below is past data trended.

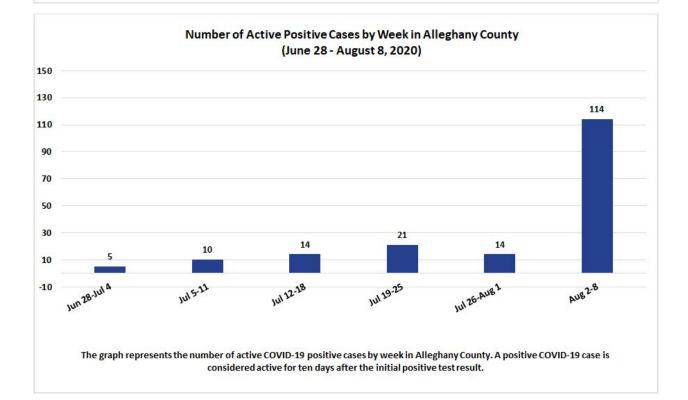

Important Disclaimer About Data

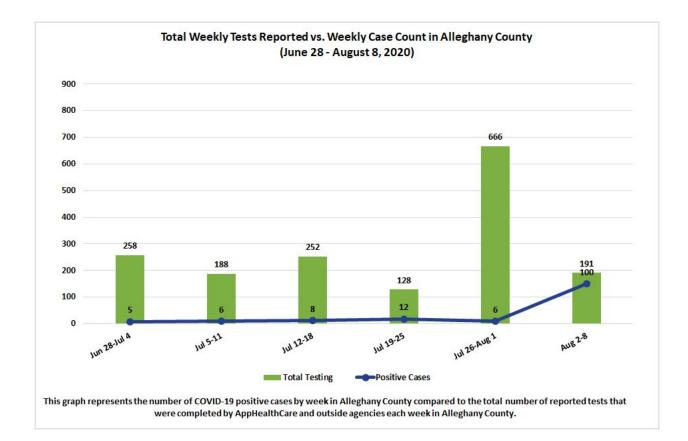

It is imperative that this report and the data contained within is understood in the appropriate context. Please, if you use this report, please be certain that the information included within is shared within the appropriate context. Doing otherwise may be damaging to the public health response efforts. There are multiple factors involved in addressing this virus, including compliance with public health control measures implemented by the local health director and referenced in NC GS 130A. These measures are imperative for limiting the spread of COVID-19. AppHealthCare strongly advises that when data is shared for the purposes of educating the public or informing policy decisions, it should come directly from NC DHHS or AppHealthCare as it is presented with appropriate context from those directly involved in public health response.

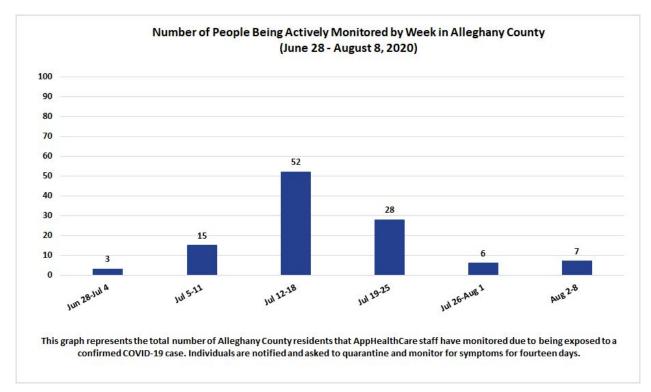

The solid navy blue line in this graph represents the number of positive COVID-19 cases among Alleghany County residents by week. This graph also shows the number of non-residents that have tested positive for COVID-19 but reside in another county.

Additional data can be found on <u>AppHealthCare's data dashboard</u>. This data is updated each day by 8pm. You may notice a difference between our case count and the <u>NC DHHS state database</u>. Sometimes

we get notification of positive results before they show up on the state dashboard. Also, individuals can sometimes get "assigned" to our counties that actually do not reside in our counties. When that happens, we work with the state to get that data reassigned to the person's place of residence.

Additional Data and Information from NC Department of Health & Human Services

- **Zip Code Data** NC DHHS publishes data for confirmed cases by zip code for the state. The map and data can be found <u>here</u>.
- **Outbreak Data & Information** This data is broken down by type of congregate setting like a nursing home, residential care facility, correctional facility, or a congregate working setting. The map by county and report can be found <u>here</u>.
- **Hospitalizations** More detailed data around hospitalizations, ventilators and bed capacity is now available by regions and can be found <u>here</u>. Our district counties are in the Triad Healthcare Preparedness Coalition.

Key Messages

 Show Your Love! This multi-county communication campaign focuses on showing your love to yourself, others around you and the community. Posters and social media graphics for the 3Ws are now available on our website in both English and Spanish. Download them <u>here</u>.

- Practice the 3Ws if you have to leave your house **Wear** a cloth face covering, **Wash** your hands frequently or use hand sanitizer and **Wait** 6 feet from others.
- Regularly clean and disinfect high-touch surfaces like doorknobs, handles, light switches, countertops, etc.
- If you are sick, please stay home except to receive medical care.
- If you are at higher risk for severe illness due to COVID-19, we encourage you to stay at home to the greatest extent possible to decrease your chance of infection.

Testing

If you meet any of the criteria listed below, we encourage you to be tested for COVID-19. You can call your healthcare provider or AppHealthCare. You should be tested if:

- You believe you have symptoms of COVID-19,
- You have no symptoms and you are at higher risk for severe illness (you are 65 or older, you have an underlying health condition or chronic condition), or have been in close contact with someone who is known to have a positive result,
- You are someone working in a frontline role or essential business where social distancing is hard to maintain,
- You are a first responder, law enforcement officer, fire department staff member, or healthcare staff member,
- You live in or work in a facility where social distancing is hard to maintain, like congregate living, healthcare facilities or home care.
- You are part of a historically marginalized population who may be at higher risk for exposure.

• You have attended protests, rallies, or other mass gatherings where you could have been exposed to someone with COVID-19 or could have exposed others because it may have been difficult to practice social distancing.

What should you do while waiting for test results? What if the test is negative or positive?

Answers for those questions, including prevention measures and home care if someone is sick are included in NC DHHS guidance <u>here</u>.

NC DHHS has tools for the public including a website to <u>Check Symptoms</u> and <u>Find My Testing Place</u>. AppHealthCare does not require someone to have symptoms to be tested.
