# Alleghany COVID-19 Situation Update
September 10th, 2021

COVID-19 Updates

- In areas with substantial and high transmission, the CDC recommends that everyone (including fully vaccinated individuals) wear a mask in public indoor settings to help prevent the spread of the Delta variant, and to protect others.

  - According to the Centers for Disease Control and Prevention, Alleghany County has a **HIGH** level of community transmission (right). Click here for North Carolina Department of Health and Human Services' County Alert System.
- AppHealthCare offers COVID-19 testing by drive-thru **Monday through Friday 8:30-10:00am** at each of our clinic locations. No appointment is needed.
- Based on CDC guidance, at this time, we are able to administer an additional dose of Pfizer or Moderna for individuals who are moderately to severely immunocompromised as recommended by the CDC. This is for individuals who have already received a 1st and 2nd dose of Pfizer or Moderna and who have a moderately or severely compromised immune system such as individuals who are undergoing cancer treatment, have had an organ transplant, are actively taking medications that suppress their immune system, have advanced or untreated HIV infection, or have another moderate or severe primary immunodeficiency condition. **Before receiving an additional dose, individuals will need to complete an attestation form stating they are eligible under the current criteria.**
- Booster doses for the general public is set to begin September 20th and depends on FDA and Advisory Committee on Immunization Practices recommendation.

Get Vaccinated to Protect Yourself Against COVID-19 and Variants

- AppHealthCare offers COVID-19 vaccines by walk-in or appointment Monday through Friday. **Walk-in hours for vaccines are 1:00-4:00pm.** If you choose to walk-in for a vaccine, you may have to wait. In order to lessen your wait time, please schedule an appointment. To schedule an appointment, call (828) 795-1970.
- Get vaccinated to protect yourself against COVID-19 and variants. With the Delta variant, this is more urgent than ever. The highest spread of cases and severe outcomes is happening in places with low vaccination rates.
- The vaccines are working like they should. They are helping prevent severe illness, hospitalization and death.
- If you get vaccinated, your risk of infection is about **3.5 times lower**, your risk of getting ill from COVID is over **8 times lower,** and your risk of hospitalization or death is about **25 times lower**.

COVID-19 Vaccination Updates

New CDC Data: COVID-19 Vaccination Safe and Strongly Encouraged for People Who are Pregnant and Breastfeeding

Getting a COVID-19 vaccine can protect you from severe illness from COVID-19.

COVID-19 vaccination is recommended for those who are pregnant, breastfeeding, trying to get pregnant now, or might become pregnant in the future. Pregnant and recently pregnant people are more likely to get severely ill with COVID-19 compared with non-pregnant people. Getting a COVID-19 vaccine can protect you from severe illness from COVID-19.
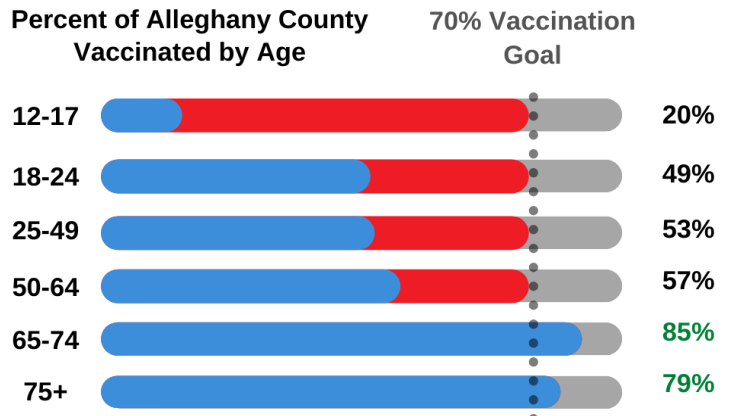

Clinicians have seen the number of pregnant people infected with COVID-19 rise in the past several weeks. The increased circulation of the highly contagious Delta variant, the low vaccine uptake among pregnant people, and the increased risk of severe illness and pregnancy complications related to COVID-19 infection among pregnant people **make vaccination for this population more urgent than ever.**

Alleghany County Vaccination Data

County-specific race, ethnicity and age data are from the NCDHHS COVID-19 Vaccination Dashboard, - *(All vaccine demographic data are current as of 9/09/2021 at 4:00 am.).*

North Carolina COVID-19 Updates

North Carolina State Synopsis

Data is from COVID-19 State Profile Report, provided by White House COVID-19 Team, Joint Coordination Cell, Data Strategy and Execution Workgroup - *(All data is current as of 9/3/2021)*

|	LAST WEEK	CHANGE FROM PREVIOUS WEEK
RATE OF NEW COVID-19 CASES PER 100,000	454	+61%
NUCLEIC ACID AMPLIFICATION TEST (NAAT) POSITIVITY RATE	12.9%	-0.3%
NEW CONFIRMED COVID-19 HOSPITAL ADMISSIONS / 100 BEDS	10.3	-13%
RATE OF NEW COVID-19 DEATHS PER 100,000	3.4	+135%
COMMUNITY TRANSMISSION LEVEL	HIGH TRANSMISSION	
PEOPLE RECEIVED AT LEAST 1 DOSE	5,900,286 people	56.3% of total pop.
PEOPLE 18+ RECEIVED AT LEAST 1 DOSE	5,531,435 people	67.6% of 18+ pop.
PEOPLE FULLY VACCINATED	4,904,412 people	46.8% of total pop.
PEOPLE 18+ FULLY VACCINATED	4,633,133 people	56.6% of 18+ pop.

COVID-19 Variants Detected in North Carolina by Week

Data is from North Carolina Department of Health and Human Services' COVID-19 Surveillance Study. (*Data is current as of 9/3/2021 at 4:00pm*)

COVID-19 Variants Being Detected in North Carolina

The Delta variant was first detected in the United States in March 2021. This variant seems to spread more easily and quickly than other variants, which may lead to more cases of COVID-19. The best way to protect yourself is by getting a COVID-19 Vaccination.

Regional COVID-19 Hospitalization Data

The hospitalization data reflected includes Watauga County. All hospitalization data is from North Carolina Department of Health and Human Services' Hospitalization Data Dashboard. The trend of hospitalizations regionally and statewide shows a steep, rapid increase. *(All data is current as of 9/9/2021 at 2:00 pm)*

COVID-19 Alleghany County Case Updates

Cases to Date in App District (Alleghany, Ashe, and Watauga counties). *(All data is current as of 9/9/2021 at 9 am)*

23,023 COVID-19 Tests Administered	**9680** Cases To Date	**735** Out of District Cases	**108** *At-Home Tests Reported	**406** Breakthrough Cases

*At-Home tests, while they provide valuable information regarding COVID status and potential spread, are not currently reportable to NCDHHS and are thus not included in our cases to date.

A breakthrough case is when someone who is fully vaccinated becomes infected.**Breakthrough cases occur in only a small proportion of vaccinated people and the vast majority are avoiding serious illness, hospitalization, or death.**
If you have COVID-19 symptoms or have been exposed to someone with COVID-19 (regardless of whether or not you have symptoms), we recommend you be tested.

AppHealthCare offers free walk-in testing. Refer to our website for more information and FAQs regarding getting tested for COVID-19.

Tests Administered Vs Positivity Rate

Alleghany County

Positivity Rate values shown on line chart: 0.88%, 4.44%, 8.96%, 12.50%, 15.84%, 8.61%, 11.68%, 8.83% for weeks July 11-July 17, July 18-July 24, July 25-July 31, Aug 1-Aug7, Aug 8-Aug 14, Aug 15-Aug 21, Aug 22-Aug 28, Aug 29-Sept 4.
Active Clusters and Outbreaks in Alleghany County

An outbreak is defined as two or more laboratory confirmed cases within a 14 day period in a congregate living setting. A cluster is defined as a minimum of five cases within a 14-day period and plausible epidemiologic linkage between cases. An outbreak or cluster is considered active until 28 days have passed with no newly identified cases. Additional information on the definitions of outbreaks and clusters is provided by the North Carolina Department of Health & Human Services.

County	Setting Name	Setting Type	Active Cases	Cumulative Cases	Latest Positive Result
