

# Allegheny COVID-19 Situation Update

September 24th, 2021

## COVID-19 Updates

- In areas with substantial and high transmission, the CDC recommends that everyone (including fully vaccinated individuals) wear a mask in public indoor settings to help prevent the spread of the Delta variant, and to protect others.

- [According to the Centers for Disease Control and Prevention](#), Allegheny County has a **HIGH** level of community transmission (right). [Click here for North Carolina Department of Health and Human Services' County Alert System.](#)

- AppHealthCare offers COVID-19 testing by drive-thru **Monday through Friday 8:30-10:00am** at each of our clinic locations. No appointment is needed.
- Based on CDC guidance, we are able to administer an additional dose of Pfizer or Moderna for individuals who are moderately to severely immunocompromised as recommended by the CDC. This is for individuals who have already received a 1st and 2nd dose of Pfizer or Moderna and who have a moderately or severely compromised immune system such as individuals who are undergoing cancer treatment, have had an organ transplant, are actively taking medications that suppress their immune system, have advanced or untreated HIV infection, or have another moderate or severe primary immunodeficiency condition. **Before receiving an additional dose, individuals will need to complete an attestation form stating they are eligible under the current criteria.**
- We have all three vaccines (Pfizer, Moderna, Johnson & Johnson) available at this time.
- **Booster doses are now recommended for some groups of people.** The CDC recommends Pfizer boosters six months after completion of the second dose for:
  - Older adults age 65+ and residents living in long-term care facilities,
  - Adults ages 50-64 at high risk of severe COVID-19 due to [underlying medical conditions](#),
  - Adults ages 18-49 at high risk of severe COVID-19 due to [underlying medical conditions](#) should, *consider* a booster based on an assessment of their individual benefits and risks and consultation with their medical provider, and
  - Adults ages 18-64 who are at increased risk for COVID-19 exposure and transmission because of occupational or institutional setting may receive a booster based on their individual benefits and risks.

***Boosters are not yet available for those who received Moderna or J&J, but we expect to have more information about them soon.***

We hope to begin administering booster doses on Monday, September 27th by appointment. If you are interested in receiving a booster and meet the criteria, you can schedule an appointment with us Monday through Friday by calling (828) 795-1970. We are also planning to have some larger community clinics where we will offer boosters. Once the details are confirmed, we will communicate that information.

## Get Vaccinated to Protect Yourself Against COVID-19 and Variants

- AppHealthCare offers COVID-19 vaccines by walk-in or appointment Monday through Friday. **Walk-in hours for vaccines are 1:00-4:00pm.** If you choose to walk-in for a vaccine, you may have to wait. In order to lessen your wait time, please schedule an appointment. To schedule an appointment, call (828) 795-1970.
- Get vaccinated to protect yourself against COVID-19 and variants. With the Delta variant, this is more urgent than ever. The highest spread of cases and severe outcomes is happening in places with low vaccination rates.
- The vaccines are working like they should. They are helping prevent severe illness, hospitalization and death.
- If you get vaccinated, your risk of infection is about **3.5 times lower**, your risk of getting ill from COVID is over **8 times lower**, and your risk of hospitalization or death is about **25 times lower**.

## New CDC Data: COVID-19 Vaccination Safe and Strongly Encouraged for People Who are Pregnant and Breastfeeding

**Getting a COVID-19 vaccine can protect you from severe illness from COVID-19.**

COVID-19 vaccination is recommended for those who are pregnant, breastfeeding, trying to get pregnant now, or might become pregnant in the future. Pregnant and recently pregnant people are more likely to get severely ill with COVID-19 compared with non-pregnant people. Getting a COVID-19 vaccine can protect you from severe illness from COVID-19.

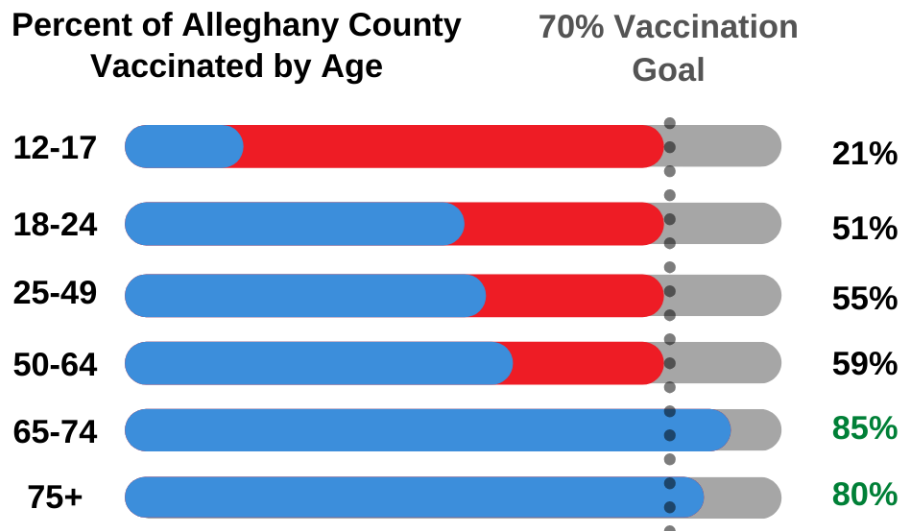

Clinicians have seen the number of pregnant people infected with COVID-19 rise in the past several weeks. The increased circulation of the highly contagious Delta variant, the low vaccine uptake among pregnant people, and the increased risk of severe illness and pregnancy complications related to COVID-19 infection among pregnant people **make vaccination for this population more urgent than ever.**

# COVID-19 Alleghany County Vaccination Updates

County-specific race, ethnicity and age data are from the [NCDHHS COVID-19 Vaccination Dashboard](#),  
 - (All vaccine demographic data are current as of 9/23/2021 at 4:00pm).

Percent of Population by Race Fully or Partially Vaccinated	
American Indian or Alaskan Native	0%
Asian	0%
Black or African American	0%
Native Hawaiian or Other Pacific Islander	0%
Other	23%
White	42%

**7,524**  
 Vaccines Administered by  
 AppHealthCare in Alleghany County  
 as of 09/24/2021.

## Regional COVID-19 Hospitalization Data

The hospitalization data reflected includes Watauga County. All hospitalization data is from [North Carolina Department of Health and Human Services' Hospitalization Data Dashboard](#). The trend of hospitalizations regionally and statewide shows a steep, rapid increase. (All data is current as of 9/23/2021 at 2:00 pm)

# COVID-19 Alleghany County Case Updates

Cases to Date in App District (Alleghany, Ashe, and Watauga counties). (All data is current as of 9/23/2021 at 9 am)

\*At-Home tests, while they provide valuable information regarding COVID status and potential spread, are not currently reportable to NCDHHS and are thus not included in our cases to date.

A breakthrough case is when someone who is fully vaccinated becomes infected. **Breakthrough cases occur in only a small proportion of vaccinated people and the vast majority are avoiding serious illness, hospitalization, or death.**

If you have COVID-19 symptoms or have been exposed to someone with COVID-19 (regardless of whether or not you have symptoms), we recommend you be tested.

**AppHealthCare offers free walk-in testing.** Refer to our [website](#) for more information and FAQs regarding getting tested for COVID-19.

## Active Clusters and Outbreaks in Alleghany County

An outbreak is defined as two or more laboratory confirmed cases within a 14 day period in a congregate living setting. A cluster is defined as a minimum of five cases within a 14-day period and plausible epidemiologic linkage between cases. An outbreak or cluster is considered active until 28 days have passed with no newly identified cases. Additional information on the [definitions of outbreaks and clusters](#) is provided by the North Carolina Department of Health & Human Services.

County	Setting Name	Setting Type	Active Cases	Cumulative Cases	Latest Positive Result
*There are no active clusters/outbreaks in Alleghany county at this time.					

*(Cluster and outbreak data is current as of 9/23/2021 at 9am)*

**Alleghany (336) 372-5641 | Ashe (336) 246-9449 | Watauga (828) 264-4995**
